INFORME TÉCNICO DE IMPLEMENTACIÓN

Gate 07J-EVID

Investment Decision Evidence Matrix & Readiness Policy

Aplicación: P&Pmis Construction AI
Fecha de corte: 30 de agosto de 2026
Repositorio: pypmis-ia-sas · branch main
Alembic: 20260830_0052 (head, sin migración nueva)
Estado exclusivo: GATE07J_EVID_POLICY_VALIDATED

RESULTADO EJECUTIVO

Se implementó una política contextual A/B/C sobre AdminConfiguration, un registro de proveedores code-backed y la integración aditiva con Gate 07J. La solución impide degradar Class A a evidencia manual, resuelve overrides por Project Type, conserva Preparations históricas y no crea Investment Decision ni FID.

Capa	Resultado	Evidencia
Política y Gate 07J	PASS	A/B/C, snapshot, no fallback, historial inmutable
Proveedores	PASS	7 entradas; 5 fuentes gobernadas reutilizadas; 2 reservadas
PostgreSQL	PASS	Head 0052; 69/69 + 68/68; downgrade/upgrade
Frontend	PASS	12 tabs ADMIN, TypeScript, Vitest 30/30
Browser	PASS	Clone, Preview, 412, Save, Publish; consola/red controladas
Localhost	ACTIVE	Frontend 5173; API 8000; draft inicial disponible

1. Baseline, alcance y REUSE BEFORE CREATE

ALCANCE APLICADO

Gate 07J-EVID es configuración + registro + validación. Gate 07J conserva ownership de Preparation, Evidence Items, readiness y handoff. La implementación no introduce un nuevo motor de readiness.

Capacidad inspeccionada	Decisión de reutilización
Gate 07J profiles / requirements	Extensión aditiva mediante snapshot de política efectiva
Gate 07I	Fuente gobernada de Portfolio Recommendation
Gate 07G / 07G-A	Budget Feasibility, dependencies y CAPEX/EXPENSE como detalle
Gate 07H	Fuente gobernada de Resource Feasibility
Gate 07J-FEL	Definition, FEL, PDRI y Cost Estimate Maturity
Gate 07J-FUND	Fuente gobernada de Funding Readiness
AdminConfiguration	DRAFT/PUBLISHED/SUPERSEDED, herencia, hash y revisión
RBAC / SecurityEvent / ETag	Patrones existentes; sin autoridad de inversión

1.1 Baseline funcional

Gate	Contrato vigente
07G	READY_FOR_PORTFOLIO_BUDGET_RECOMMENDATION
07G-A	GATE07G_A_OPC_ALIGNMENT_VALIDATED
07H	READY_FOR_PORTFOLIO_RESOURCE_RECOMMENDATION
07I	READY_FOR_INVESTMENT_GATE_PREPARATION
07J	READY_FOR_INVESTMENT_DECISION; can_enter_fid=false
07J-FEL	GATE07J_FEL_RELEASE_VALIDATED
07J-FUND	GATE07J_FUND_RELEASE_VALIDATED

2. Arquitectura A/B/C y regla de no fallback

Clase	Semántica	Validación	Fallo
A	GOVERNED_SOURCE_REQUIRED	Provider AVAILABLE, contrato, scope, current y readiness	Bloquea; manual prohibido
B	GOVERNED_EVIDENCE_SUFFICIENT	Referencia controlada, owner/issuer, fechas, hash y validación	SUBMITTED no es VALID
C	NOT_REQUIRED	No crea requisito efectivo	Sin blocker ni warning

CONTROL CRÍTICO

Class A nunca se convierte silenciosamente en Class B. Provider ausente produce SOURCE_PROVIDER_MISSING; contrato incompleto produce PROVIDER_CONTRACT_INVALID; scope incompatible produce SCOPE_UNSUPPORTED; source_current=false produce SOURCE_STALE.

2.1 Modelo de política

Grupo	Campos gobernados
Identidad	requirement_key, evidence_type, classification, required, blocking
Fuente	provider_key, provider_required, minimum readiness/stage/maturity
Contexto	Gate Profile, Governance Model, Project Type, scope
Freshness	validity_period_days y current-with source flags
Coverage	minimum coverage; EACH_PROJECT no promedia Projects faltantes
Manual	allow_manual_reference y manual_validation_required sólo para B

3. Provider Registry y validación de contrato

Evidence	Provider	Source	Status	Scopes
Portfolio Recommendation	GATE07I_PORTFOLIO_RECOMMENDATION	Gate 07I	AVAILABLE	Portfolio / Set
Budget Feasibility	GATE07G_BUDGET_FEASIBILITY	Gate 07G/A	AVAILABLE	Portfolio / Set
Resource Feasibility	GATE07H_RESOURCE_FEASIBILITY	Gate 07H	AVAILABLE	Portfolio / Set
Definition/FEL/PDRI/Estimate	GATE07J_FEL_PROJECT_DEFINITION	Gate 07J-FEL	AVAILABLE	Each / Selected
Funding Readiness	GATE07J_FUND_FUNDING_READINESS	Gate 07J-FUND	AVAILABLE	Portfolio / Set
Risk Readiness	RISK_READINESS_PROVIDER	Reserved	UNAVAILABLE	Portfolio / Set / Each
Permit Readiness	PERMIT_READINESS_PROVIDER	Reserved	UNAVAILABLE	Each / Selected

CONTRATO MÍNIMO

evidence_type · scope · readiness_status · source_current · evidence_hash · as_of_date · warnings · blockers. El registro es code-backed y la UI no acepta endpoints ejecutables arbitrarios.

4. Matrices efectivas por Investment Gate Profile

4.1 PYP-INV-SELECT — Investment Selection Preparation

Evidence	Class	Block	Provider	Scope	Validity	Coverage
Portfolio Recommendation	A	Sí	Gate07I	Portfolio	Contextual	—
Budget Feasibility	A	Sí	Gate07G/A	Portfolio	Contextual	—
Resource Feasibility	B	No	Gate07H / manual	Portfolio	Contextual	—
Project Definition	A	Sí	Gate07J-FEL	Each	365 d	100%
FEL Stage	A	Sí	Gate07J-FEL	Each	365 d	100%
PDRI / Definition	A	Sí	Gate07J-FEL	Each	365 d	100%
Funding Readiness	B	No	Gate07J-FUND / manual	Portfolio	180 d	—
Risk Readiness	B	No	Manual validated	Project Set	90 d	—
Permit Readiness	B	No	Manual validated	Each	180 d	80%
Contracting Strategy	B	No	Manual validated	Each	365 d	80%
Execution Plan	B	No	Manual validated	Each	365 d	80%
Schedule Maturity	B	No	Manual validated	Each	180 d	80%
Cost Estimate Maturity	B	No	Manual validated	Each	180 d	80%
Environmental / Social	C	No	Manual / N/A	Each	—	—
Land Access	C	No	Manual / N/A	Each	—	—
Stakeholder Readiness	C	No	Manual / N/A	Each	—	—
Technical Assurance	C	No	Manual / N/A	Each	—	—
Other Governed Evidence	C	No	N/A	Portfolio	—	—

4.2 PYP-FFA — Full Funds Authorization Preparation

Evidence	Class	Block	Provider	Scope	Validity	Coverage
Portfolio Recommendation	A	Sí	Gate07I	Portfolio	Contextual	—
Budget Feasibility	A	Sí	Gate07G/A	Portfolio	Contextual	—
Resource Feasibility	A	Sí	Gate07H	Portfolio	Contextual	—
Project Definition	A	Sí	Gate07J-FEL	Each	365 d	100%
FEL Stage	A	Sí	Gate07J-FEL	Each	365 d	100%
PDRI / Definition	A	Sí	Gate07J-FEL	Each	365 d	100%
Funding Readiness	A	Sí	Gate07J-FUND	Portfolio	180 d	—
Risk Readiness	A	Sí	Risk provider	Project Set	90 d	100%

Evidence	Class	Block	Provider	Scope	Validity	Coverage
Permit Readiness	B	Sí	Manual validated	Each	180 d	100%
Contracting Strategy	B	Sí	Manual validated	Each	365 d	100%
Execution Plan	B	Sí	Manual validated	Each	365 d	100%
Schedule Maturity	B	Sí	Manual validated	Each	180 d	100%
Cost Estimate Maturity	A	Sí	Gate07J-FEL	Each	180 d	100%
Environmental / Social	B	No	Manual / N/A	Each	180 d	100%
Land Access	B	No	Manual / N/A	Each	180 d	100%
Stakeholder Readiness	B	No	Manual / N/A	Each	180 d	100%
Technical Assurance	B	No	Manual / N/A	Each	365 d	100%
Other Governed Evidence	C	No	N/A	Portfolio	—	—

5. Contexto, overrides y decisiones ADR

Resolución	Comportamiento
PYP-FFA + Mining + Permit	Base B → A; provider reservado; manual insuficiente; blocking 100%
PYP-FFA + Building + Permit	Conserva B; evidencia controlada requiere validación
Mixed Mining + Building	EACH_PROJECT resuelve ambos Projects sin colapsar tipo
DIRECT_INTERNAL / CONTRACTOR_DELIVERY	C por defecto; no vuelve obligatorio el gate
CAPITAL_OWNER	Aplica matriz publicada e inheritance contextual

5.1 Ocho decisiones obligatorias

Domain	INV-SELECT	FFA / override	Decision y acción
Risk	B · 90 d	A · block · 100%	Provider missing; construir primero
Permit	B · 180 d · 80%	B; Mining=A · block · 100%	Manual base; provider después de Risk
Contracting	B · no block	B · block · 100%	Documento gobernado suficiente; no engine
Execution Plan	B · no block	B · block · 100%	PEP validado suficiente; no engine
Schedule Maturity	B · no block	B · block · 100%	Assessment suficiente; no CPM
Cost Estimate	B · manual	A · FEL · block · 100%	Reusar FEL; no duplicar fuente
Environmental/Social	C	B · 180 d · 100%	Validación manual; no nuevo módulo
Land Access	C	B · 180 d · 100%	Validación manual; no nuevo módulo

DECISIONES DE DETALLE

Project Dependencies permanece en el resumen de Budget Feasibility. CAPEX/EXPENSE/UNCLASSIFIED permanece como detalle presupuestal y de restricciones de funding; ninguno se convierte en evidence type independiente.

6. Integración con Gate 07J y compatibilidad histórica

Momento	Comportamiento
Nueva Preparation	Obtiene política PUBLISHED efectiva por portfolio/profile
Snapshot	policy id/revision/hash, matrix, providers y Project contexts
Class A	Resuelve adapter gobernado; error permanece blocking; manual prohibido
Class B	Governed source opcional o SUBMITTED → VALIDATED manual
Class C	NOT_REQUIRED; sin blocker/warning
Refresh	Conserva snapshot; no auto-upgrade silencioso
FROZEN / legacy	Hash, profile, requirements y evidence no se reinterpretan
Handoff	Gate 07J sigue siendo owner; can_enter_fid=false

6.1 Validity, coverage, blocking y conditions

Control	Regla
Validity	Por requirement; no existe expiración global única
Freshness	Current-with Project Set / Recommendation / Budget / FEL según evidence
Coverage	EACH_PROJECT valida todos; 2/3 = 66,67%; threshold 100% bloquea
Expired B	VALID vencida se vuelve EXPIRED y genera EVIDENCE_EXPIRED
Conditions	VALID_WITH_CONDITIONS sólo si Gate Profile lo permite; usa patrón Gate 07J
Blocking	A siempre bloquea si fuente inválida; B sólo cuando requirement.blocking

7. Superficies ADMIN/USER, APIs y seguridad

ADMIN MODE

Enterprise Strategy Manager → Investment Governance → Investment Decision Evidence Policy. Se usa CompactModuleHeader y 12 tabs: Overview, Investment Gate Profiles, Evidence Matrix, Project Type Overrides, Provider Registry, Readiness Rules, Validity, Coverage, Blocking Policy, Missing Providers, Preview e History.

API	Método	Control
/investment-evidence-policy/overview	GET	Policy, providers, gaps, ADRs, boundaries
/configurations	GET	Historia por revisión
/configurations/{id}/clone	POST	If-Match; DRAFT
/configurations/{id}	PUT	If-Match; 412 ETAG_MISMATCH
/configurations/{id}/preview	POST	persisted=false
/configurations/{id}/publish	POST	Supersede + immutable publish
/providers[/{key}]	GET	Registry read-only
/effective/preview	POST	Contextual dry-run
/missing-providers	GET	Deterministic gap analysis

7.1 RBAC, ETag y auditoría

Área	Implementación
Permissions	read · configure · publish · provider.read
Roles	investment_evidence_policy_admin / viewer; organization_admin heredado
Actions	view, clone, edit, preview, publish, view registry, view gaps
Concurrency	DRAFT writes usan ETag/If-Match; stale = 412
SecurityEvent	cloned, updated, published, superseded; sin ruido por reads
USER	Consume resultado dentro de Gate 07J; no proceso transaccional independiente

8. Pruebas, PostgreSQL, browser y regresión

Validación	Resultado	Cobertura
Backend policy + Gate 07J	11/11 PASS	A/B/C, mixed types, stale, 412, audit, historical
PostgreSQL baseline suite	69/69 PASS	07D/07E y gobernanza transversal
PostgreSQL portfolio suite	68/68 PASS	07E–07J-EVID + provider/service tests
Migration	PASS	0052 → 0051 → 0052; EVID no añade schema
Frontend targeted	2/2 PASS	Matrix, registry, dry-run, next provider
Frontend AppFlow	28/28 PASS	USER/ADMIN navigation and existing modules
Browser 07J-EVID	1/1 PASS	Clone, override, Preview, 412, Save, Publish
Browser console/network	PASS	0 uncaught; 0 unexpected 4xx/5xx; controlled 412
Ruff / ESLint / TypeScript	PASS	Backend and frontend static validation

8.1 Casos funcionales críticos

Caso	Resultado
Risk A + provider unavailable	SOURCE_PROVIDER_MISSING; blocker; no manual fallback
Permit B manual	SUBMITTED hasta validación independiente; luego VALID
Land Access C	NOT_REQUIRED; sin blocker/warning
Mining override	PYP-FFA Permit B → A
Mixed Set	Mining y Building resueltos por Project
Stale A	SOURCE_STALE; no degradación
Expired B	EXPIRED por reglas Gate 07J
Coverage	No se promedian Projects faltantes
Invalid provider contract	PROVIDER_CONTRACT_INVALID
Historical	Preparation pre-policy queda intacta

9. Protección de baseline persistente

Medida	Antes	Después	Conclusión
Alembic head	20260830_0052	20260830_0052	Sin migración
AdminConfiguration	79	80	+1 starter DRAFT esperado
Gate Profiles	2	2	Sin reemplazo de lifecycle
EVID policy revisions	0	1	Starter DRAFT, no auto-publish
Provider registry	0 tablas	7 code-backed	Sin endpoints ejecutables
Gate07J Preparations / Items	0 / 0	0 / 0	Preview no persistió
Enterprise Workspaces	14	14	Sin cambio
Project ID14 hash	1ba97904…	1ba97904…	Inalterado
FEL / Funds / Funding	0 / 0 / 0	0 / 0 / 0	Inalterado
Budget / Resource Scenarios	0 / 0	0 / 0	Inalterado

ENTORNO EFÍMERO

Las suites PostgreSQL se ejecutaron en PostgreSQL 16 con tmpfs y proyecto Compose aislado. Al terminar se eliminaron contenedores y red. El baseline local sólo recibió el único starter DRAFT solicitado.

10. Final Gap Analysis

Grupo exacto	Salida validada
AVAILABLE GOVERNED SOURCES	Portfolio, Budget, Resource, Definition, FEL, PDRI, Funding y Cost Estimate (FFA vía FEL)
MISSING GOVERNED SOURCES	Risk para PYP-FFA; Permit para PYP-FFA + Mining
GOVERNED EVIDENCE SUFFICIENT	Risk Selection; Permit base; Contracting; Execution; Schedule; Cost Selection; FFA E&S/Land/Stakeholder/Technical
NOT REQUIRED	Selection E&S/Land/Stakeholder/Technical; Other; governance fuera de CAPITAL_OWNER

DECISIÓN ÚNICA SIGUIENTE

NEXT = BUILD_MISSING_GOVERNED_PROVIDER · provider = RISK_READINESS_PROVIDER. Es el primer gap blocking Class A para PYP-FFA. No se inicia su implementación en este gate.

ESTADO EXCLUSIVO FINAL

GATE07J_EVID_POLICY_VALIDATED. final_output = READY_FOR_INVESTMENT_DECISION_EVIDENCE_POLICY. can_design_investment_decision_gate=false mientras exista el gap Risk; can_enter_fid=false siempre.

STOP BOUNDARY

No Risk Manager, Permit Manager, Contracting Manager, Execution Plan Manager, Schedule Manager, Cost Estimate Manager, Investment Decision, FID, GO/HOLD/RECYCLE/KILL, Project Initialization, Activation o Execution.
